

FRP Bridge Drain Pipe Case History

Shreveport, LA 2004

Service

Replacing the existing rusted, steel drains located in the entertainment district of Shreveport, Louisiana.

Features & Benefits

The fiberglass bridge drain pipe, being more lightweight and easier to handle than its steel alternative, allowed for a quick installation by the contractor resulting in minimal downtown and interference for tourist attractions in the area. The pipes no rust, no rot, and no paint characteristics will also benefit the area with an aesthetically pleasing system for many years to come.

Pipe System

- 480' 10" Bridge Drain Pipe
- 78 10" Custom fittings
