

FRP Bridge Drain Pipe Case History

Metrolink St. Louis, MO Light Rail

Service

Metrolink wanted an attractive drain system for their light rail bridges. The above photos are at the University of Missouri – St. Louis North station.

Features & Benefits

Thousands of people travel the Metrolink system each year. Keeping the tracks, bridges, railings and deck attractive is a major goal with Metrolink. Fiberglass reinforced plastic has the advantage of no rust and always looks new. In addition to the FRP bridge drain pipe and fittings, FRP grating was used to span the tracks.

Pipe Systems

Thousands of feet of 6" – 10" FRP bridge drain pipe was used along with hundreds of fittings, troughs and custom parts.
